

I. Subject Specification

1. Basic Data

1.1 Title

Steel and Composite Structures

1.2 Code

BMEEOHSAS47

1.3 Type

Module with associated contact hours

1.4 Contact hours

| Type | Hours/week / (days) |
|---------|------------------------|
| Lecture | 3 |

1.5 Evaluation

Midterm grade

1.6 Credits

4

1.7 Coordinator

| | |
|---------------|--|
| name | Dr. Kovács Nauzika |
| academic rank | Associate professor |
| email | kovacs.nauzika@emk.bme.hu |

1.8 Department

Department of Structural Engineering

1.9 Website

<https://epito.bme.hu/BMEEOHSAS47>

<https://edu.epito.bme.hu/course/view.php?id=4577>

1.10 Language of instruction

hungarian and english

1.11 Curriculum requirements

Compulsory in the Civil Engineering (BSc) programme

1.12 Prerequisites

Strong prerequisites:

- Steel Structures (BMEEOHSAT42)
- Reinforced Concrete Structures (BMEEOHSAT43)

1.13 Effective date

5 February 2020

2. Objectives and learning outcomes

2.1 Objectives

The aim of the Subject is to teach the structural speciality, layout and design of plated girders, including the followings: effect of internal forces and moments interaction on the cross-sectional resistance and stability phenomenon; the configuration and design of simple connections.

The further aim is to teach the configuration, behaviour and the basis of the elastic and plastic design methods of composite girders.

2.2 Learning outcomes

Upon successful completion of this subject, the student:

A. Knowledge

1. knows the general terminology of the steel and composite structures,
2. knows the design methods of welded plate girders,
3. knows the cross-sectional and stability phenomenon interaction of steel structures,
4. knows the configuration of simple steel structural joints,
5. knows the configuration of composite girders,
6. knows the elastic design method of composite girders,
7. knows the plastic design method of composite girders,
8. knows the elastic and plastic design methods of shear connections.

B. Skills

1. able to design of steel plate girders,
2. able to design of steel columns under eccentric compression,
3. able to design the simple joints of steel structures,
4. able to determine the elastic and plastic resistance of composite beam cross-section,
5. able to do design the shear connections by elastic and plastic methods.

C. Attitudes

1. opened to gain new knowledge, increase their knowledge by continuous learning,
2. opened to used IT devices,
3. pursue to accurate and error-free solutions

D. Autonomy and Responsibility

1. design the steel and composite beams individually based on given source materials,
2. apply systematic thinking

2.3 Methods

The theoretical background of the design of the steel and composite structures are explained on the lectures and numerical examples are solved on the exercise classes. Homework examples should be solved individually by the Student and check the correct results online with the aim to be prepared for the mid-term exams.

2.4 Course outline

| Week | Topics of lectures and/or exercise classes |
|------|---|
| 1. | Local plate buckling: class 4 sections, shear buckling. |
| 2. | Welded plate girders: configuration, design concepts. |
| 3. | Beam-columns: cross-section classification, cross-sectional resistances. |
| 4. | Beam-columns: stability behaviour and design. |
| 5. | Simple connection: beam splices and column bases. |
| 6. | Simple connection: pinned column base connection. |
| 7. | Simple connection: beam-to-beam connections. |
| 8. | Concept of composite construction, structural layout and behaviour. |
| 9. | Design of composite structures: basis. |
| 10. | Composite beams: elastic calculation for short and long term loadings. |
| 11. | Composite beams: cross-section classification. |
| 12. | Composite beams: cross-sectional resistances |
| 13. | Configuration of shear connectors and design by elastic and plastic method. |
| 14. | Steel and composite structures: examples. |

The above programme is tentative and subject to changes due to calendar variations and other reasons specific to the actual semester. Consult the effective detailed course schedule of the course on the subject website.

2.5 Study materials

Online materials

1. ESDEP Course WG.10. Composite structures
2. Slides of Lectures.
3. Solved examples.
4. Sample for midterm exams

2.6 Other information

Attendance to lectures and exercise classes is compulsory. The signature and credits of the subject will be refused to students attending less than 70% of the classes.

2.7 Consultation

The instructors are available for consultation during their office hours, as advertised on the department website. Special appointments can be requested via e-mail:

kovacs.nauzika@emk.bme.hu or seres.noemi@emk.bme.hu

This Subject Datasheet is valid for:

2025/2026 semester I

II. Subject requirements

Assessment and evaluation of the learning outcomes

3.1 General rules

The assessment of the learning outcomes specified in clause 2.2. above and the evaluation of student performance occurs via midterm tests and homework assignments.

3.2 Assessment methods

| Evaluation form | Abbreviation | Assessed learning outcomes |
|---|--------------|------------------------------------|
| 1. midterm test | MT1 | A.1-A.2; B.1 |
| 2. midterm test | MT2 | A.3-A.4; B.2-B.3 |
| 3. midterm test | MT3 | A.5-A.8; B.4-B.5 |
| 1-3. homework | HW1 | A.1-A.4; B.1-B.5; C.1-C.3; D.1-D.2 |
| attendance and activity (optional; positive only) | A | A.1-A.8; B.1-B.5 |

The dates of deadlines of assignments/homework can be found in the detailed course schedule on the subject's website.

3.3 Evaluation system

| Abbreviation | Score |
|--------------------|-------------|
| MT1 | 33% |
| MT2 | 33% |
| MT3 | 34% |
| Sum | 100% |
| HW bonus | 10% |
| Sum + bonus | 110% |

Midterm exams:

- All midterm exams have theoretical (test) and practical (examples) parts.
- **Successful completion of all three midterm exams—both theoretical (test) and practical (example) parts—with a score of at least 30% is a necessary but not sufficient condition for passing the course; see point 3.5.**

Home works:

- Home works are optional.
- The aim of the home works are the preparation for the practical part of the midterms. They are parametric practical examples, unique for each student.
- Max. 10 bonus points are gained by Home works.

3.4 Requirements and validity of signature

Signature is not gained in this Subject.

3.5 Grading system

Steel and Composite Structures - BMEEOHSAS47

The course performance evaluation system includes 3 mandatory midterm exams and several smaller, optional calculation-based homework assignments.

The midterms consist of a theoretical (test) and a practical (example) parts. To pass the course, students must achieve at least 30% of the points in both parts of all three midterms (test: 4 points, example: 6 points). Any midterm with a score below 30% is considered failed and **must be retaken**. A score of 30% or higher is considered successful.

Attention! A minimum of 50 points must be earned from the midterms to achieve a passing grade. If all midterms are passed with only the minimum 30%, the total score will still fall short of the passing threshold!

| Achievable max. points: | Abbreviation | Max points |
|-------------------------|---------------------|---|
| | MT1 | 33 point (theory:13 point + practice: 20 point) |
| | MT2 | 33 point (theory:13 point + practice: 20 point) |
| | MT3 | 34 point (theory:14 point + practice: 20 point) |
| | Sum | 100 points |
| | HW bonus | 10 points |
| | Sum + bonus: | 110 point |

| The grade of the semester based on the gained points: | Grade | Points (P) |
|---|------------------|------------------|
| | excellent (5) | $85 \leq P$ |
| | good (4) | $75 \leq P < 85$ |
| | satisfactory (3) | $65 \leq P < 75$ |
| | passed (2) | $50 \leq P < 65$ |
| | failed (1) | $P < 50$ |

3.6 Retake and repeat

1. Each midterm exam (ZH) can be retaken **once**, according to the schedule.
2. A failed midterm ($<30\%$) can be improved during the retake opportunity.
3. A passed midterm ($\geq 30\%$) can be improved during the retake opportunity.
4. The better result between the original and the retake will be considered.
5. Homework assignments are –, —, and are intended to support preparation for the midterms.
6. With optional homework, a maximum of – can be earned, which will be added **to midterm scores that are –**.

3.7 Estimated workload

| Activity | Hours/semester |
|---------------------------------------|--------------------|
| contact hours | $14 \times 3 = 42$ |
| preparation for the courses | $7 \times 2 = 14$ |
| preparation for the midterm tests | $2 \times 14 = 28$ |
| homework | 18 |
| home studying of the written material | 18 |
| Sum | 120 |

3.8 Effective date

5 September 2025

This Subject Datasheet is valid for:

2025/2026 semester I
