Steel Structures - BMEEOHSAT42

I. Tantárgyleírás

1. Alapadatok

1.1 Tantárgy neve

STEEL STRUCTURES

1.2 Azonosító (tantárgykód)

BMEEOHSAT42

1.3 Tantárgy jellege

Kontaktórás tanegység

1.4 Óraszámok

Típus	Óraszám / (nap)
Előadás (elmélet)	3

1.5 Tanulmányi teljesítményértékelés (minőségi értékelés) típusa

Félévközi érdemjegy

1.6 Kreditszám

3

1.7 Tárgyfelelős

név	Dr. Kövesdi Balázs Géza (fall semester), Dr. Kovács Nauzika (spring semester)
beosztás	Egyetemi docens
email	kovesdi.balazs@emk.bme.hu

1.8 Tantárgyat gondozó oktatási szervezeti egység

Hidak és Szerkezetek Tanszék

1.9 A tantárgy weblapja

https://epito.bme.hu/BMEEOHSAT42
https://edu.epito.bme.hu/course/view.php?id=4700

1.10 Az oktatás nyelve

magyar és angol

1.11 Tantárgy típusa

Kötelező az építőmérnöki (BSc) szakon

1.12 Előkövetelmények

Strong prerequisites:

- Introduction to Strength of Materials (BMEEOTMAT42)
- Basis of Design (BMEEOHSAT41)

Weak prerequisites:

- Construction Materials I. (BMEEOEMAT43)

1.13 Tantárgyleírás érvényessége

2020. február 5.

2. Célkitűzések és tanulási eredmények

2.1 Célkitűzések

Lectures of Steel Structures have the general aim to study the basics of the design of steel structures, which consists of the design of simple structural members, simple joints and the investigation of the basic failure phenomenon, which can occur in steel structures. The students get knowledge in the following topics: steel grades, mechanical properties of the steel material; calculation of cross-sectional properties; design of centrically loaded tension members; design of centrically loaded compression members; buckling problem – behaviour – design method; design of beams: construction, behaviour under bending and shear interaction; beam structural behaviour - design approaches for lateral torsional buckling; design of bolted connections; design of welded connections; fatigue design and brittle fracture; plate buckling phenomena, basics of the cross-section classification.

2.2 Tanulási eredmények

A tantárgy sikeres teljesítése utána a hallgató

A. Tudás

1. knows the limit states used for design of steel structures,
2. knows the design method of centrically loaded tension members,
3. knows the design method of centrically loaded compression members,
4. knows the design method of restrained beam members loaded by bending and shear,
5. knows the design method used for lateral torsional buckling,
6. knows the design basics of bolted joints,
7. knows the design basics of welded joints,
8. knows the buckling phenomena and the basics of the cross-section classification.

B. Képesség

1. can design a centrically loaded tension member,
2. can calculate the buckling resistance of centrically loaded compression member,
3. can perform the cross-section check of beam elements,
4. can calculate the lateral torsional buckling resistance of beams,
5. can calculate the resistance of bolted joints,
6. can calculate the resistance of welded joints,

C. Attitűd

1. is ready to learn advanced new design methods,
2. is intent on learning and applying the relevant tools of steel structural design,
3. is intent on precise and error-free problem solving,

D. Önállóság és felelősség

1. is able to autonomously evaluate the design problems of steel structures and able to autonomously complete design calculations based on the literature.

2.3 Oktatási módszertan

Lectures, large hall calculation examples, communication in written and oral form, application of IT devices and techniques.

2.4 Részletes tárgyprogram

Week	Topics of lectures and/or exercise classes
1.	Introduction. Steel, as a structural material; mechanical properties; notations; steel production.
2.	Centrically loaded tension members. Structural layout – behaviour – design method.
3.	Centrically loaded compression members. Buckling problem: Structural layout – behaviour – design method.

4.	Centrically loaded compression members. Buckling length determination.
5.	Beams: construction, behaviour under bending and shear and M-V interaction. Behaviour - design approaches.
6.	Beams: Lateral torsional buckling. Behaviour – design approaches, general and simplified design methods.
7.	Design philosophy of beam members – examples.
8.	Design and layout of steel joints; construction aspects of welded and bolted joints and their application fields.
9.	Design of welded connections: structural layouts, structural behaviour, limit states, design approaches.
10.	Design of welded connections / design approaches / examples.
11.	Design of bolted connections: structural layouts, structural behaviour, limit states, design approaches.
12.	Design of bolted connections / design approaches / examples.
13.	Plate buckling phenomena, design methods.
14.	Basics of the cross section classification; conceptional design of steel structures / case studies.

A félév közbeni munkaszüneti napok miatt a program csak tájékoztató jellegű, a pontos időpontokat a tárgy honlapján elérhető "Részletes féléves ütemterv" tartalmazza.

2.5 Tanulástámogató anyagok

a) Textbooks

1. Halász, Platthy: Acélszerkezetek.

b) Online materials

1. Lecture notes
2. Examples for practical design of steel structures

2.6 Egyéb tudnivalók

--

2.7 Konzultációs lehetőségek

The instructors are available for consultation during their office hours, as advertised on the department website. Special appointments can be requested via e-mail: kovesdi.balazs@emk.bme.hu (fall semester) and kovacs.nauzika@emk.bme.hu (spring semester).

Jelen TAD az alábbi félévre érvényes:

2025/2026 semester I

II. Tárgykövetelmények

3. A tanulmányi teljesítmény ellenőrzése és értékelése

3.1 Általános szabályok

The assessment of the learning outcomes specified in clause 2.2. above and the evaluation of student performance occurs via midterm tests, home works and attendance on the lectures.

3.2 Teljesítményértékelési módszerek

Evaluation form	Abbreviation	Assessed learning outcomes
1. midterm exam (summary evaluation)	MT1	A.1-A.3; B.1-B.2; C.1-C.3; D.1
2. midterm exam (summary evaluation)	MT2	A.4-A.5; B.3-B.4; C.1-C.3; D.1
3. midterm exam (summary evaluation)	MT3	A.6-A.8; B.5-B.6; C.1-C.3; D.1
1-3 home work	HW	A.1-A.8; B.1-B.6; C.1-C.3; D.1
attendance and activity (optional; positive only)	A	A.1-A.8; B.1-B.6

A szorgalmi időszakban tartott értékelések pontos idejét, a házi feladatok ki- és beadási határidejét a "Részletes féléves ütemterv" tartalmazza, mely elérhető a tárgy honlapján.

3.3 Teljesítményértékelések részaránya a minősítésben

Abbreviation	Score
MT1	33%
MT2	33%
MT3	34%
Sum	100%
HW bonus	10%
Sum+bonus	**110%**

Midterm exams:

- All midterm exams have theoretical (test) and practical (examples) parts.
- **Successful completion of all three midterm exams—both theoretical (test) and practical (example) parts—with a score of at least 30% is a necessary but not sufficient condition for passing the course; see point 3.5.**

Home works:

- Home works are optional.
- The aim of the home works are the preparation for hte practical part of the midterms. They are parametric practical examples, unique for each students.
- Max. 10 bonus points are gained by Home works.

3.4 Az aláírás megszerzésének feltétele, az aláírás érvényessége

No signature can be achieved.

3.5 Érdemjegy megállapítása

The course performance evaluation system includes 3 mandatory midterm exams and several smaller, optional calculation-based homework assignments.

The midterms consist of a theoretical (test) and a practical (example) parts. To pass the course, students must achieve at least 30% of the points in both parts of all three midterms (test: 4 points, example: 6 points). Any midterm with a score below 30% is considered failed and**must be retaken**. A score of 30% or higher is

considered successful.

Attention! A minimum of 50 points must be earned from the midterms to achieve a passing grade. If all midterms are passed with only the minimum 30%, the total score will still fall short of the passing threshold!

Achiavble max. points:

Abbreviation	**Max points**
MT1	33 point (theory:13 point + practice: 20 point)
MT2	33 point (theory:13 point + practice: 20 point)
MT3	34 point (theory:14 point + practice: 20 point)
Sum	100 points
HW Bonus	10 points
Sum+ bonus	**110 point**

The grade of the semester based on the gained points:

Grade	**Points (P)**
excellent (5)	85<=P
good (4)	75<=P<85
satisfactory (3)	65<=P<75
passed (2)	50<=P<65
failed (1)	P<50

3.6 Javítás és pótlás

1. Each midterm exam (ZH) can be retaken ., according to the schedule.
2. A failed midterm (<30%) . be improved during the retake opportunity.
3. A passed midterm (≥30%) . be improved during the retake opportunity.
4. The better result between the original and the retake will be considered.
5. Homework assignments are ., ___, and are intended to support preparation for the midterms.
6. With optional homework, a maximum of . can be earned, which will be added ____.

3.7 A tantárgy elvégzéséhez szükséges tanulmányi munka

Activity	**Hours/semester**
contact hours	14×3=42
preparation for the tests , home works	2×16=32
home studying of the written material	16
Sum	**90**

3.8 A tárgykövetelmények érvényessége

2025. szeptember 5.

Jelen TAD az alábbi félévre érvényes:

2025/2026 semester I
